VOLUME CONTENTS

VOL. 29, NO. 1 CONTENTS 1989

Translation of Number 1

Kh. D. Ikramov — 1 A diagonalization theorem for a type of Hamiltonian using operator theory in spaces with an indefinite metric

Yu. L. Gaponenko and S. L. Logunov — 9 The stability of the solution of an integral equation of the first kind on bounded and compact sets

I. M. Islamov — 17 An asymptotically optimal method for solving an ill-posed classification problem

N. M. Novikova — 27 A method of finding a stochastic saddle point

D. S. Dzhumabayev — 34 Criteria for the unique solvability of a linear boundary-value problem for an ordinary differential equation

L. V. Maslovskaya — 46 A generalized Cholesky algorithm for mixed discrete analogues of elliptic boundary-value problems

A. A. Bykov and M. K. Trubetskov — 52 Optimization of the shape of the periodic interface between two homogeneous media with different permittivities

S. I. Smagin — 57 The method of potentials in the three-dimensional electromagnetic-wave diffraction problem

B. L. Rozhdestvenskii, I. N. Simakin and M. I. Stoinov — 65 Investigation of the stability of a pulsating Poiseuille flow in a planar channel

A. S. Kiselev, A. N. Kondratenko and A. V. Panasenko — 73 Calculation of non-stationary viscous flows with domains with strong non-uniformities

L. N. Larina and V. A. Rykov — 77 Three-dimensional flow of a rarefied gas past a conical body

A. V. Lukshin and S. N. Smirnov — 83 An efficient stochastic algorithm for solving the Boltzmann equation

Short Communications

A. S. Dzhyugis — 88 The fast Fourier transform in odd cosines

M. V. Fedoryuk — 90 The stationary phase method: focusing in a line

M. V. Khazanov — 94 The solution of the equations of fluid dynamics when the channel wall is subjected to external vibrations

A. A. Gladkov — 97 On vortex production in computational aerodynamics

A. N. Kraiko, A. R. Polyanskii and N. I. Tillyayeva — 99 "Through" computation of flows with shock waves

A. A. Andreyev and A. S. Kholodov — 103 On three-dimensional supersonic flow past blunt bodies when interference is present

Yu. P. Golovachev and N. V. Leont'yeva — 107 Numerical simulation of supersonic variable-density gas flow past a sphere

E. I. Grigolyuk and P. Ya. Nosatenko — 110 A spatial approach to the numerical solution of problems of the mechanics of thin-walled structures

Translation of Number 2

S. M. Ermakov, A. A. Zhigyavskii and M. V. Kondratovich — 112 Comparison of some random search procedures for a global extremum

V. A. Emelichev and V. A. Perepelitsa — 117 On some algorithmic problems of multicriterion optimization on graphs

K. R. Aida-Zade — 125 Computational problems for hydraulic systems

E. A. Novikov, Yu. A. Shitov and Yu. I. Shokin — 132 A class of (m, k)-methods for solving stiff systems

Yu. B. Suris	138	The canonicity of mappings generated by Runge–Kutta type methods when integrating the systems $\ddot{x} = -\partial U/\partial x$
V. K. Gorbunov	145	The method of normal spline collocation
S. A. Gabov and S. T. Simakov	155	The theory of internal and surface waves in a stratified liquid
A. R. Maikov, A. D. Poyezd, A. G. Sveshnikov and S. A. Yakunin	165	Difference schemes of initial-boundary value problems for Maxwell's equations in an unbounded domain
V. A. Rykov	173	The construction of a complete set of divergent forms of the conservation equations based on the Boltzmann equations
K. V. Nikolayev	182	Direct statistical modelling of the circumfluence of a sphere by a rarefied gas in the transitional regime
S. N. Smirnov	187	Justification of a stochastic method for solving the Boltzmann equation
A. M. Bishayev, E. F. Limar, S. P. Popov and E. M. Shakhov	193	The entry of a freely expanding gas jet into a circular aperture in a transverse obstacle
A. I. Khisamutdinov	198	Choosing the "Russian roulette and splitting" parameters for Monte Carlo computation of radiation transfer
		Short Communications
G. K. Kaishibayeva and U. M. Sultangazin	204	Asymptotic behaviour of the solution of a time-dependent boundary-value problem for the system of equations of the method of spherical harmonics
V. A. Shcherbina	208	Fundamental solutions of three-dimensional cell problems for some equations of mathematical physics
M. Yu. Kozmanov	213	Existence theorem for the solution for the non-linear system of equations of spectral radiation transport
V. A. Korobitsyn	217	Thermodynamically matched difference schemes
A. I. Sherstyuk, M. S. Yur'yev and N. S. Yakovleva	220	The use of a continuous analogue of Newton's method to solve the equations of a non-selfsustaining gas discharge
S. L. Popyrin	221	Estimates of the error when the solution of the Boltzmann equation is approximated by the solution of the ITO stochastic differential equation

VOL. 29, NO. 2 CONTENTS 1989

		Translation of Number 3
V. P. Malyukov	1	A constructive method of solving a differential game of quality with two terminal surfaces
Ya. D. Sergeev and R. G. Strongin	7	A global minimization algorithm with parallel iterations
K. R. Aida-Zade	15	Study and numerical solution of finite difference approximations of distributed-system control problems
A. A. Bykov	21	The pivotal-condensation method for solving stiff boundary-value problems for systems of linear difference equations
A. A. Denisov, A. V. Koldoba and Yu. A. Poveshchenko	32	The convergence to generalized solutions of difference schemes of the reference-operator method for Poisson's equation
I. T. Khabibullin and A. G. Shagalov	39	Numerical solution of a problem of analytic Riemann conjugation
V. D. Didenko and V. N. Matskul	45	Approximate solution of singular integral equations with conjugations
P. I. Akimov, G. P. Osipova and V. A. Syrovoi	54	Problems in increasing the accuracy of programs for analysing the trajectories of intense electron beams
G. T. Golovin	67	Problems of the numerical simulation of stationary charged-particle beams
Zh. T. Zhumagaliyeva	75	Numerical computation of supersonic flow in a dihedral angle

P. M. Byval'tsev and M. Ya. Ivanov — 82 — A method of computing transonic potential flows in turbine cascades

Short Communications

V. A. Strishkov — 90 — Asymptotic correctness of the integral equations of electrodynamics in the thin-wire approximation

Yu. D. Pletner and L. V. Tverskaya — 94 — The problem of the vibrations of a rotating stratified liquid excited by a planar disc

A. A. Raines — 99 — Calculation of processes in a mixture of gases when there is a large concentration difference

Translation of Number 4

V. G. Korneyev — 102 — Schemes for solving elliptic differential equations of order $2n$, $n \geqslant 2$, with incompatible curvilinear finite elements near the boundary

V. A. Galaktionov and S. A. Posashkov — 112 — New exact solutions of parabolic equations with quadratic non-linearities

V. F. Apel'tsin — 119 — A generalized method of mappings in static boundary value problems for domains with analytic boundaries

A. A. Amosov and A. A. Zlotnik — 129 — A difference scheme on a non-uniform mesh for the equations of one-dimensional magnetic gas dynamics

A. A. Abramov, L. A. Vainshtein, A. L. Dyshko and N. B. Konyukhova — 140 — Numerical investigations of the free electrical axisymmetrical oscillations of an ideally conducting prolate spheroid

S. A. Gabov and P. A. Krututskii — 154 — On the small vibrations of a section placed at the boundary of separation between two stratified liquids

A. A. Tikilyainen — 162 — On an initial-boundary value problem for a rotating liquid with a flow

Ngo Zui Kan and Chan Tkhu Kha — 171 — The small motions of a system of viscous rotating fluids when thermal convection is present

E. D. Kovalev, I. K. Lifanov, A. A. Mikhailov, M. I. Nisht and G. G. Polikarpov — 181 — A numerical method of designing an aircraft with a solid fuselage

Yu. P. Pushtaev — 187 — The flutter of a wing with an aileron in transonic flow

Short Communications

A. L. Goncharov — 192 — The use of gradient methods to solve sparse nonsymmetric systems of algebraic equations

A. V. Tuzinkevich — 196 — Transition to chaotic behavior in a simple integral model of population dynamics

E. M. Nazarov and A. G. Chentsov — 201 — Duality and dynamic programming in the control of simple motion

E. P. Zhidkov, I. V. Kuts, R. V. Polyakova, I. A. Shelaev and I. P. Yudin — 203 — The solution of the non-linear inverse problem of magnetostatics by the regularization method

S. L. Popyrin — 207 — A fully conservative particle algorithm for the Boltzmann equation

F. V. Srumova — 211 — Asymptotic behaviour of energy radiated by randomly positioned sources of oscillations

V. D. Abramov — 212 — A method of accelerating the rate of convergence of iterations by collision

F. P. Vasil'yev, V. V. Morozov and M. Yachimovich — 216 — Estimate of the rate of convergence of the regularization method for solving the linear programming problem

VOL. 29, NO. 3 CONTENTS 1989

Translation of Number 5

E. E. Tyrtyshnikov — 1 — New fast algorithms for systems with Hankel and Teoplitz matrices

V. Ya. Arsenin, A. V. Kryanev and M. V. Tsupko-Sitnikov — 7 — The use of robust methods to solve ill-posed problems

V. G. Bazhenov and D. T. Chekmarev	13	On index commutativity in numerical differentiation
A. M. Krot	23	The method of eigentransforms in different fields for computing cyclic convolutions and discrete Fourier transforms
S. I. Repin	35	A variational-difference method of solving problems with functionals of linear growth
E. M. Kiseleva	47	Solution of the problem of optimal partitioning including allocation of the centres of gravity of the subsets
Yu. N. Sotskov	57	The stability of high-speed optimal schedules
L. S. Klabukova	63	On whether boundary value problems of the theory of momentless elastic shells whose curvature can vanish are well-posed
A. A. Abramov, N. B. Konyukhova, B. S. Pariiskii, V. Yu. Prikhod'ko and V. V. Tyutekin	74	Numerical studies of free and forced oscillations in a compressible fluid of closed elastic shells of revolution with positive moment
Yu. S. Kosolapov	87	Calculation of stationary subsonic and transonic non-potential flows of an ideal gas in axially symmetric channels
		Short Communications
V. V. Ditkin	94	An iterative method of solving the eigenvalue problem for a polynomial pencil of linear operators
I. L. Osipov	99	Generalization of the linear interpolation procedure
V. A. Avdeyenko and A. A. Malyukov	101	A quadrature formula for the Fourier integral based on the use of a cubic spline
F. A. Aliyev, B. A. Bordyug and B. V. Larin	104	Orthogonal projections and solution of algebraic Riccati equations
Yu. P. Golovachev and N. V. Leont'yeva	108	Supersonic flow past a sphere in a gas with a periodic density structure
F. V. Srumova	110	Asymptotic behaviour of the energy for the solution of an evolutionary stochastic system of equations
		Translation of Number 6
I. D. Bliadze and G. V. Meladze	112	Iterative decomposition methods for solving systems of equations with a block-tridiagonal matrix
A. A. Abramov, A. L. Dyshko, N. B. Konyukhova and T. V. Levitina	119	Evaluation of Lamé angular wave functions by solving auxiliary differential equations
Yu. M. Danilin	132	Quadratic penalty methods based on linear approximation
V. R. Kogan and V. V. Kuznetsov	140	A method for the numerical simulation of unsteady gravity–capillary waves of finite amplitude
V. N. Levkin	146	A solvability criterion for the boundary-value problem for the transport equation and some corollaries
V. S. Galkin and N. K. Makashev	155	Calculation of the transport properties of polyatomic gases for an arbitrary non-equilibrium form of the flow
A. N. Veretentsev, P. I. Geshev, P. A. Kuibin and V. Ya. Rudyak	163	On the development of the method of vortex particles as applied to the description of detached flows
M. Ya. Ivanov, V. G. Krupa and R. Z. Nigmatullin	170	A high-accuracy version of Godunov's implicit scheme for integrating the Navier–Stokes equations
P. N. Babishchevich	180	Composite adaptive meshes in problems of mathematical physics
D. Yu. Korotkov and A. V. Shipilin	188	The approximate factorization method for calculating the potential in a semiconductor structure
I. L. Sofronov	193	A numerical iterative method for solving regular elliptic problems

Short Communications

I. M. SOBOL 201 Quadrature formulae for functions of several variables satisfying a general Lipschitz condition

V. M. RYABOV 207 The properties of quadrature formulae used for the inversion of Laplace transforms

O. E. BURYAK 209 Splitting method for solving stochastic differential equations describing a diffusion process in an N-particle system

N. M. NOVIKOVA 213 An iterative regularization for approximating the penalties method in Hilbert space

VOL. 29, NO. 4 CONTENTS 1989

Translation of Number 7

G. I. SHISHKIN 1 Approximation of the solutions of singularly perturbed boundary-value problems with a parabolic boundary layer

A. I. FEDOTOV 11 An approach to the construction of a quadrature-difference method for solving singular integrodifferential equations

D. M. VAVRIV and V. B. RYABOV 18 Fractal dimensions: computational problems

A. R. MAIKOV, A. D. POYEZD, A. G. SVESHNIKOV and S. A. YAKUNIN 26 The use of a conservative finite difference method to model high-current microwave devices

A. S. IL'INSKII and M. V. TUPIKOV 34 A new scheme of the projection method for studying corrugated circular waveguides

V. F. BUTUZOV, N. N. NEFEDOV and E. V. POLEZHAYEVA 41 The asymptotic solution of linearized problems on the natural and forced resonance oscillations of a medium of low viscosity

V. B. GLASKO and N. I. OL'KHOVSKAYA 50 The problem of synthesis in NMR tomography

M. I. BELISHEV and YA. V. KURYLEV 56 The inverse spectral problem of the scattering of plane waves in a half-space with a local inhomogeneity

M. K. AUKIN and R. K. TAGIROV 65 A second-order finite-difference scheme for computing three-dimensional supersonic flows of an ideal gas

V. A. KOROBITSYN 71 Invariant variational-difference schemes and conservation laws

Short Communications

L. A. MUKHAREV 79 Finding the roots of $f(x) = 0$ by expansion in powers of a parameter introduced into the equation

V. M. RYABOV 83 The properties of quadrature formulas of the highest accuracy used for Laplace transform inversion

S. A. VOITSEKHOVSKII and V. M. KALININ 87 Limit of the rate of convergence of difference schemes for the first boundary-value problem of elasticity theory in the anisotropic case

A. YU. DEM'YANOV, YU. A. DEM'YANOV and SH. A. KASYMOV 91 Numerical investigation of non-stationary selfsimilar boundary-layer problems with a break zone

Translation of Number 8

L. N. KOROTAYEVA, A. N. SESEKIN and A. G. CHENTSOV 96 A modification of the dynamic programming method for the travelling salesman problem

V. V. OSTAPENKO 100 Equivalent definitions of conservative finite-difference schemes

S. A. GABOV 111 The flow of a floating fluid with the formation of standing waves over an uneven periodically varying bottom

A. A. TIKILYAINEN 121 A method of solving the Cauchy problem for a class of equations in mathematical physics

S. G. KREIN and CHAN TKHU KHA 127 The problem of the flow of a non-uniformly heated viscous fluid

V. T. VOLKOV, S. V. KRYUCHKOV, I. A. OBUKHOV and S. V. RUMYANTSEV — 132 — An asymptotic–numerical method of analysing transport processes in semiconductors

P. G. AKISHIN — 138 — On a method of calculating the magnetic fields in systems with an axisymmetric configuration of the ferromagnetic material

V. E. CHIZHOV — 143 — An integral equation for the binary correlation function

A. S. BARASHKOV — 149 — Asymptotic forms of solutions of Maxwell's equations

T. A. GERMOGENOVA and E. B. PAVEL'YEVA — 158 — The characteristic equation in radiation transport problems in elongated cylindrical regions

V. I. GRYN, M. K. KERIMOV and V. A. OVSYANNIKOV — 170 — On coagulation models and the calculation of the optical properties of aerosols

Short Communications

G. S. GANSHIN — 184 — Matrix methods for computing the values of a multivariable polynomial

KHA YUIBIN — 188 — Explicit approximation by fifth-degree splines with interpolation near the boundary

S. L. POPYRIN — 192 — On some stochastic models of rarefied gas dynamics

O. I. DRIVOTIN and D. A. OVSYANNIKOV — 195 — New classes of stationary solutions of Vlasov's equation for an axially symmetrical beam of charged particles of constant density

I. V. SAVENKOV — 200 — The formation of a three-dimensional wave packet in the boundary layer on a plate for high Reynolds numbers

YU. A. ZUYEV — 204 — The worst case for decision-making by a majority vote

V. A. VINOKUROV and V. L. SHAPOSHNIKOV — 205 — A numerical method for solving multipoint boundary-value problems for systems of ordinary differential equations

Translation of Number 9

A. MARSHAK — 1 — The dependence of the rate of convergence of the method of discrete ordinates on the choice of the first node in the quadrature formula

G. I. SHISHKIN — 9 — A difference scheme for a singularly perturbed parabolic equation with discontinuous coefficients and concentrated factors

R. S. VARDANYAN and N. B. ENGIBARYAN — 20 — The solution of one class of convolution-type integral equations

A. I. FEDOTOV — 27 — The convergence of quadrature-difference methods for linear singular integrodifferential equations

S. K. DEMIN and R. P. TARASOV — 33 — Numerical solution of the problem of the scattering of a potential field by a system of screens with symmetry

A. V. NESTEROV — 40 — On the asymptotic forms of the solution of a system of diffusion-sorption equations with small diffusion coefficients

V. V. GAFIICHUK and L. A. LUBASHEVSKII — 50 — Analysis of interface dynamics in the quasi-stationary Stefan problem

E. I. BESPALOVA — 60 — The solution of problems in elasticity theory by complete-system methods

A. G. KUL'MIN — 66 — Study of gas-flow stability in nozzles and diffusers

S. A. SHCHERBAKOV — 75 — Calculation of transonic flow past the after-part of a plane or axisymmetric body

V. V. NEKRUTKIN and N. I. TUR — 84 — The substantiation of a scheme for the direct modelling of rarified gas flows

I. N. LUSHCHAKOVA and V. A. STRUSEVICH — 94 — Two-stage queuing systems with resource constraints and without prescribed flow paths

Short Communications

A. M. LEVIN 105 Regularization of criterial problems of the method of least squares

N. N. PAVLOV 110 Smoothing of input data in the solution of ill-posed problems

G. N. PLESHAKOV 114 The optimal effect of the method of tangents

D. D. BUREV 117 Optimal stabilization of discrete non-linear objects of high-order

N. N. PISARUK 121 Representation of the lattice of optimal solutions in the problem of submodular function minimization

F. V. LUBYSHEV 126 The accuracy of difference approximations and the regularization of optimal control problems for an elliptic equation with controls in the coefficients

M. V. REZTSOV 128 Averaging of the system of equations of elasticity theory in a thin periodically inhomogeneous layer

Translation of Number 10

L. V. KOLEV 130 Modified interval mean-value forms

N. V. KINH 141 On the stability of the discrepancy method for solving operator equations of the first kind with perturbed operators

V. A. DAUGAVET and P. V. YAKOVLEV 147 Mean square approximation of a rectangular matrix by matrices of lower rank

V. I. GRYN 158 Inverse three-dimensional problems of radiation transport theory close to two-dimensional plane and cylindrical problems

G. N. ASTRAKHANTSEV 167 On a mixed finite-element method in problems of shell theory

V. F. BONDARENKO and A. V. MOSHINSKII 177 Convergence-improving transformations for some Schloemilch series

A. I. TOLSTYKH 183 Compact third-order approximations in algorithms for an incompressible fluid

V. N. GOLUBKIN and V. V. NEGODA 195 Calculation of the flow past a delta wing in the thin shock layer approximation

V. V. LARCHENKO 201 Bifurcational indeterminacy and fluctuation of branch points under conditions of singular perturbation

D. V. KOCHETKOV 211 Invariant classification algorithms satisfying non-redundancy and monotonicity conditions

A. V. KHILKOV 220 Formulas for calculating estimates for recognition algorithms with support sets

Short Communications

I. P. RYAZANTSEVA 225 An algorithm for solving non-linear monotone equations with unknown input data error bound

V. I. BILENKO 230 An approximation method of solving Volterra–Urysohn integral equations with polynomial non-linearities

A. P. TIZIK and V. I. TSURKOV 233 A decomposition procedure for one class of block programming problems

V. G. ANISIMOV and E. G. ANISIMOV 238 A method of solving one class of integer programming problems

YU. D. SHMYGLEVSKII and L. V. SHURSHALOV 242 The unsuitability of replacing the solutions of the Navier–Stokes equations by the numerical solution of Euler's equations

I. S. LITVINCHEV 244 Iterative aggregation in linearly quadratic control problems with cross couplings

VOL. 29, NO. 6 CONTENTS 1989

Translation of Number 11

N. G. USHAKOV 1 Reconstruction of patterns by regularization

S. A. Abramov	7	Rational solutions of linear differential and difference equations with polynomial coefficients
V. A. Korobitsyn	13	Axisymmetric difference operators in an orthogonal coordinate system
A. D. Dzhavadyan	22	Grid selection in the variation-difference method for solving second-order elliptic equations with quasidegenerate quadratic form
G. A. Mikhailov	34	Minimax Monte-Carlo method for solving integral equations of the second kind
S. A. Gabov and P. A. Krutitskii	42	On the energy characteristics of a horizontal channel filled with a stratified fluid
B. P. Belinskii	51	The basisity of the system of eigenfunctions of the transverse cross-section of waveguides with flexible walls
S. N. Dimova, M. S. Kaschiyev and S. P. Kurdyumov	61	Numerical analysis of the eigenfunctions for the combustion of a non-linear medium in the radial-symmetric case
V. V. Rubtsov and Yu. A. Surinov	73	Methods of solving non-stationary problems of the theory of radiation–conduction heat transfer
I. Kh. Sigal	80	A sequence for using algorithms for the approximate solution in the hybrid algorithm for solving the travelling salesman problem
A. A. Aleksanyan	85	Realization of weakly defined Boolean functions by linearized disjunctive normal forms

Short Communications

V. N. Karmazin and V. A. Morozov	91	Stable numerical methods for solving systems of linear algebraic equations of general form
A. R. Poluektov	95	A method of successive approximations for selecting the regularization parameter in the numerical solution of ill-posed problems
L. A. Aizenberg, B. A. Kravtsov and B. A. Shaimkulov	97	An estimate of the stability of interpolation of signals with a finite Fourier spectrum and a computational experiment
V. A. Pospelov	100	An algorithm for the numerical solution of ordinary differential equations of the second and higher orders
R. I. Medvedskii and Yu. A. Sigunov	101	Solution of one-dimensional non-linear heat-conduction problems on an isothermal mesh
D. V. Potskhishvili	106	Decomposition of an arbitrary discontinuity for an elastic string
V. V. Karpenko, A. S. Pankratov and L. A. Yushina	110	Tables of coefficients for determining sixteen eigenvalues of Mathieu's differential equation with a real parameter
